

Playlist Program

Goal: To create a program which can create and modify a playlist. The playlist shall be saved to the disk such that it can be modified over several executions of the program. The following assumptions can be made:

- The playlist will not allow you to actually play music, merely document the list
- There is only a single playlist
- A song contains the following information:
 - Title
 - Artist
 - Year
 - Length
- The format of the file shall be: title;artist;year:length where title and artist can contain multiple spaces, length is a single integer specifying the amount of seconds, and the fields are separated by a semicolon.
- The user shall be able to perform multiple actions per execution
